Subject: Revised Supplemental Site Characterization Work Plan for OU2: CBA - Request for Referenced Documents

Prashant,

TechLaw is in the process of evaluating the response to EPA Review of the Supplemental Site Characterization Work Plan for Operable Unit 2: Cell Building Area Surface Soil, dated March 2021 for the LCP Chemicals Site Brunswick, Georgia, as well as the Revised Supplemental Site Characterization Work Plan for Operable Unit 2: Cell Building Area Surface Soil, dated June 2021 (Revised Work Plan). Several responses (i.e., to General Comment #4, #5, #6, #7, #10 and Specific Comment #3, #4, #5) indicate that the information/clarification requested in the comments is included in supplemental documents. These documents are: a Supplemental Field Sampling Plan (SFSP), cited as EPS, 2021a; an amended Quality Assurance Project Plan (QAPP), cited as EPS, 2021b; and a Revised Human Health Baseline Risk Assessment (HHBRA) Technical Memorandum, dated March 23, 2021.

It is understood that the EPA provided approval of the HHBRA Technical Memorandum dated March 23, 2021 in a letter dated June 24, 2021. However, it is unclear if the other two referenced documents (the SFSP or the amended QAPP) have been provided to the EPA. Have these documents been submitted under separate cover to the EPA? To expedite the review of the subject revised work plan, could I get a copy of these two documents?

Sincerely,

Kristan Avedikian
